

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

entering the throat at all." The closing paragraph of the account notes the "tone of gentleness" of these birds, and their "silent dignity," but adds: "True, to be exact, their silence is more a necessity than a virtue, since they are possessed of no true vocal organ, but it so befits their other actions that it may well be laid to their credit without too close examination."

In the home-life of the Common Heron its checkered history is noted. In early times it was protected as royal game, but since the breechloader has ousted the falcon, he is no longer *protected* to be *destroyed*, but *from* destruction, since the angling fraternity are now "clamoring loudly for his blood."

Mr. Beetham's narrative is entertainingly written and adds greatly to our knowledge of the intimate home-life of these shy and interesting birds, while the beautiful photographic plates add a realism that no amount of word-painting can supply.—J. A. A.

Simon on the Hummingbirds of Ecuador.¹—Ecuador is divided into three regions, (1) the low hot region between the Pacific and the western Cordillera, (2) the area between the two Andean ranges, and (3) the basins of the Rio Napo and Rio Pastassa. The characteristic forms of Hummingbirds of each are indicated and the ranges of various genera, as represented in the three districts, are commented upon. The list numbers 152 species, with notes on their ranges, and with pertinent technical comment. *Taphrospilus* is proposed as a new genus, with *Aphantochroa hyposticta* Gould as type; *Prasitis vitticeps* is described as new. The catalogue is a valuable contribution to our knowledge of the species of Hummingbirds thus far recorded from Ecuador and of their distribution.—J. A. A.

Gunning and Haagner's 'A Check-List of the Birds of South Africa.'²—The northern boundary of the area here included is approximately latitude 16° S., or "a line formed by the Cunene River on the east and the Zambesi River on the west." As said in the Introduction, Dr. Reichenow's 'Vogel Afrikas' is taken as the basis of the list, this being "the only complete modern work on African Ornithology, and as he has evidently bestowed much time and care on the subject of the nomenclature of South African birds. Where we have cause to differ from Dr.

¹ Catalogue général des Trochilidés observés jusqu'à ce jour dans la République de l'Écuador. Par E. Simon. Revue Française d'Ornithologie, Nos. 17 et 18, Sept.-Oct., 1910, pp. 257-270.

² A Check-List of the Birds of South Africa, Being a record of all the species known to occur south of the Zambezi-Cunene line (the 16th degree of south latitude). By Dr. J. W. B. Gunning, President, South African Ornithologists' Union, and Alwin Haagner, F. Z. S., Colonial Member, British Ornithologists' Union, Honorary Member, Royal Hungarian Bureau of Ornithology, Honorary Secretary, South African Ornithologists' Union. Annals Transvaal Museum, Vol. II, July, 1910, Suppl., pp. 84.
